

The Association for Molecular Pathology (AMP) and the American Society for Investigative Pathology (ASIP) Announce that Elsevier Will Publish *The Journal of Molecular Diagnostics (JMD)* in 2011

The Association for Molecular Pathology (AMP) and the American Society for Investigative Pathology (ASIP) are pleased to announce that Elsevier will publish *The Journal of Molecular Diagnostics (JMD)* beginning in January 2011. Under managed publishing, the Society still owns the journal, maintains copyright, and retains full editorial control [manuscript handling (acceptances and rejections), content, editorial policy, and scope]. Elsevier will manage Journal publication (copyediting, composition, and production), website features, subscriptions, advertising, and marketing.

Dr. Mark E. Sobel, Executive Officer of both AMP and ASIP, states, "AMP and ASIP are confident that partnering with Elsevier will enable us to further our goal of globally promoting clinical applications and research in molecular pathology by expanding the reach and impact of the high-quality articles published in *The Journal of Molecular Diagnostics*."

"Elsevier is thrilled to partner with AMP and ASIP to publish the *JMD*. The journal is at the forefront in publishing translational research and technological advances in molecular medicine. We welcome the journal and the societies into the Elsevier family," states Andrew Berin, Publishing Director, Elsevier.

The decision to partner with Elsevier was reached by AMP and ASIP after a thoughtful review of journal publishing processes. The advantages of Elsevier's global reach and experience in the ever-changing field of scientific publication will benefit the *JMD*, its authors, and its readers.

###

About The Association for Molecular Pathology

The Association for Molecular Pathology (AMP) is an international medical professional association dedicated to the advancement, practice, and science of clinical molecular laboratory medicine and translational research based on the applications of molecular biology, genetics and genomics. Through the efforts of an enthusiastic membership from across the United States and around the world, AMP continues to grow in numbers and influence. The organization is divided into the scientific subdivisions of genetics, infectious diseases, hematopathology, and solid tumors. The AMP membership includes individuals from academic medical centers, independent laboratories, government, and industry, including physicians, laboratory directors, scientists, medical technologists, and trainees. AMP members are at the forefront of the development and implementation of novel molecular diagnostic tests, whether these are laboratory developed or commercially developed. AMP members proudly accept their responsibilities in assessing the analytical validity, clinical validity, clinical utility, and the clinical utilization of molecular tests for each specific patient. For more information, please visit <http://www.amp.org>.

About The American Society for Investigative Pathology (ASIP)

The American Society for Investigative Pathology is an educational professional not-for-profit society dedicated to the discovery, advancement, and dissemination of basic and translational knowledge in experimental pathology and related disciplines. This is achieved by fostering investigation into the pathogenesis,

classification, diagnosis, and manifestations of disease through meetings, publications, and educational activities. Investigative pathology is an integrative discipline that links the presentation of disease in the whole organism to its fundamental cellular and molecular mechanisms, using a variety of structural, functional, and genetic techniques and ultimately applies research findings to the diagnosis and treatment of diseases. ASIP advocates for the practice of investigative pathology and fosters the professional career development and education of its members. For more information, please visit <http://www.asip.org>

About Elsevier

Elsevier is a world-leading publisher of scientific, technical and medical information products and services. The company works in partnership with the global science and health communities to publish more than 2,000 journals, including The Lancet and Cell, and close to 20,000 book titles, including major reference works from Mosby and Saunders. Elsevier's online solutions include SciVerse ScienceDirect, SciVerse Scopus, Reaxys, MD Consult and Nursing Consult, which enhance the productivity of science and health professionals, and the SciVal suite and MEDai's Pinpoint Review, which help research and health care institutions deliver better outcomes more cost-effectively.

A global business headquartered in Amsterdam, Elsevier (<http://www.elsevier.com>) employs 7,000 people worldwide. The company is part of Reed Elsevier Group PLC (<http://www.reedelsevier.com>), a world-leading publisher and information provider, which is jointly owned by Reed Elsevier PLC and Reed Elsevier NV. The ticker symbols are REN (Euronext Amsterdam), REL (London Stock Exchange), RUK and ENL (New York Stock Exchange).
